DETAILED ACTION

Response to Amendment

This office action is in response to the amendment filed 4/5/10. Claims 23 and 25-30 are examined below. Claims 1-21 are cancelled. Claims 22, 24 and 31-42 are withdrawn.

Drawings

1. The drawings are objected to because a clean copy of the drawings should be provided. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Art Unit: 3673

Specification

2. The disclosure is objected to because of the following informalities: a marked up copy of the changes made to the specification should be submitted. Appropriate correction is required.

Information Disclosure Statement

1. The IDS submitted 4/5/10 is considered.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 23 and 25-30 are provisionally rejected on the ground of nonstatutory double patenting over claims 28-29 and 31-34 of copending Application No. 10/590638 and claims 44 and 52 of copending application no 10/587352. This is a provisional double patenting rejection since the conflicting claims have not yet been patented.

The subject matter claimed in the instant application is fully disclosed in the referenced copending application and would be covered by any patent granted on that copending application since the referenced copending application and the instant application are claiming common subject matter, as follows: a latch having a head part, body part, and sliding holding elements (please note that plates are considered slides since the plates perform a sliding motion).

Furthermore, there is no apparent reason why applicant would be prevented from presenting claims corresponding to those of the instant application in the other copending application. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.

Claim Rejections - 35 USC § 112

- 4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 5. Claim 23, 25-30 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 6. Regarding claim 25 it remains unclear how the holding elements are resilient but then made of rigid material as claimed in 25. Rigid is taken to mean stiff yet resilient is normally taken to mean just the opposite. Further description is necessary.
- 7. Regarding claims 23, 25-30, the cylinder still remains unclear as the cylinder does not appear to be pictured as a cylinder, or is not a similar cylinder in all embodiments. Is the cylinder the same as the head? Further clarification is needed.

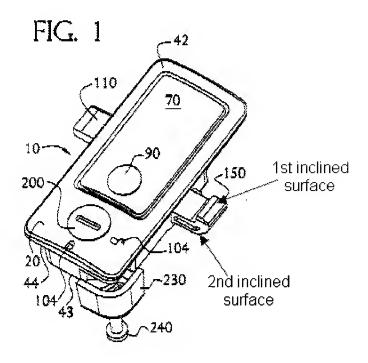

Art Unit: 3673

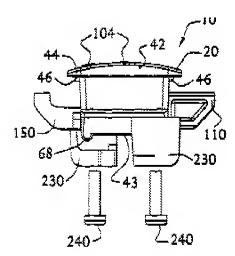

Claim Rejections - 35 USC § 102

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 8. Claims 23 and 25-30 are rejected under 35 U.S.C. 102(b) as being anticipated by Vickers (US 6145352).
- 9. Regarding claims 23 and 26, Vickers teaches a latch having a head part (42) arranged outside a thin wall, a body part (20 below 42) which proceeds from the head part and projects through the opening in the mounted position, holding elements (110 and 150) which project from the body part and are flexible in a direction, a free end of the holding elements being provided with an inclined surface (see figure 3), the body part and the holding elements being separate parts and the holding elements being slides. Please note "as best understood" for the last limitation of claims 28 and 31 and claim 34, Vickers shows a lock cylinder (200) associated with holding elements (110 and 150). As best understood, Vickers shows the slides are held against a pressure spring force (198) by a hook arrangement (tabs and slots seen in figures 9 and 10). Vickers further shows first and second inclined surfaces as shown below.

Art Unit: 3673

Claim Rejections - 35 USC § 103

- 10. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Art Unit: 3673

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

- 11. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - 1. Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.
 - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 12. Claims 25 and 27-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vickers as applied to claim 31 above and further in view of Anderson (US 5251467).
- 13. Regarding claim 25, Vickers fails to disclose the material of the holding elements. It is within the level of ordinary skill to select a known material on the basis of its suitability for the intend use as a matter of obvious design choice. See 112 rejection above.
- 14. Regarding claims 27-28, Vickers shows applicant's inventive concept of a latch with sliding holding elements but fails to show screws screwed into the head arrangement to regulate movement of the holding elements but Anderson shows this to be well known in the art. Anderson shows a screw (37) entering through a head arrangement which regulates the extent of movement of the holding elements 25 by holding spaces 35 against cam 41. Using screws to secure the sliding members of Vickers as taught by Anderson would have been obvious to one of ordinary skill in the art since replacing one known securing means (tab and slot of Vickers) with another

Art Unit: 3673

known securing means (screw of Anderson) is considered to be within the level of ordinary skill in the art and would yield predictable results since the screw of Anderson has proven useful as a securing means in the prior art.

15. Regarding claims 29 and 30, Vickers shows a fastener with a cylinder and slides as holding elements as stated above.

Response to Arguments

Applicant's arguments filed 4/5/10 have been fully considered but they are not persuasive. Applicant does not mention the double patenting rejection and should acknowledge the rejection. Further, applicant's response is labeled with the incorrect serial number at the top of the pages and should be corrected. As best understood, Vickers shows two inclined surfaces as labeled above. Please note that applicant should focus on structural differences as the prior art has the claimed structure and is capable of performing the claimed functional language (the "for" language). Applicant should not rely solely on functional language to define over the prior art. The arguments stating that the holding elements are not for supporting the body part, are not persuasive as this is intended use and functionality of the lock. An apparatus is claimed and Vickers shows the structure of the apparatus claimed and is therefor capable of performing the claimed limitations. Applicant is invited to call the examiner to further discuss and clarify applicant's inventive concept.

Conclusion

1. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to KRISTINA R. FULTON whose telephone number is (571)272-7376. The examiner can normally be reached on M-TH 7-6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Peter Cuomo can be reached on 571-272-6856. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
